

Bottoms Up 5.0 – Round 1 Business Case

Client: *EeVee Infrastructure Corporation (EIC)*

Background

EeVee Infrastructure Corporation (EIC) is a fictional public-sector enterprise established by the Government of India to accelerate the adoption of electric vehicles (EVs) by developing a nationwide charging infrastructure. Over the past five years, EIC has installed more than **2,800 public charging stations** across major cities and national highways.

Despite this expansion, EV adoption remains uneven across regions. Urban charging stations experience high utilization during peak hours, while several highway and semi-urban stations operate significantly below capacity. Additionally, private charging network operators have entered the market, increasing competition and raising customer expectations around accessibility, reliability, and charging speed.

The Ministry of Power has approved funding for **one major strategic investment initiative** to strengthen India's EV charging ecosystem over the next five years. However, due to budget limitations, only one proposal can be implemented in the current investment cycle.

The Executive Board of EIC has appointed your consulting team to evaluate the available alternatives and recommend the most suitable strategic investment.

Current Industry Snapshot

Parameter	Value
Public Charging Stations	2,800
Annual EV Growth Rate	32%
Average Station Utilization	46%
Fast Charging Stations	35% of total network
Annual Capital Budget	₹5,000 Crore
Target Year	2030

Strategic Investment Options

Option A – Nationwide Fast Charging Expansion

Expand the existing charging network by installing **2,000 additional DC fast charging stations** across highways, metropolitan cities, and industrial corridors.

Estimated Investment: ₹4,800 Crore

Implementation Timeline: 4 Years

Expected Network Growth: +70%

Option B – Rural & Tier-2 EV Accessibility Program

Develop a distributed charging network across Tier-2 cities, Tier-3 towns, and rural growth corridors through partnerships with fuel stations and local businesses.

Estimated Investment: ₹3,900 Crore

Implementation Timeline: 5 Years

Expected Coverage Increase: +55% geographic coverage

Option C – Intelligent Charging Network Modernization

Upgrade the existing charging infrastructure using digital technologies, including:

- AI-enabled demand forecasting
- Smart load balancing
- Dynamic pricing
- Predictive maintenance
- Mobile reservation platform
- Renewable energy integration
- Remote monitoring and analytics

Estimated Investment: ₹2,600 Crore

Implementation Timeline: 3 Years

Expected Increase in Station Utilization: 30%

Additional Information

- National EV registrations are projected to increase by **28–35% annually** over the next decade.
 - Approximately **68% of EV owners currently prefer home charging**, while commercial fleets rely heavily on public charging infrastructure.
 - Peak-hour congestion has been reported at charging stations in major metropolitan areas.
 - Renewable energy integration has become a priority under India's long-term sustainability goals.
 - Government funding beyond the current allocation is unlikely before the next planning cycle.
 - Customer surveys indicate that charger availability, charging speed, and reliability are the three most important factors influencing user satisfaction.
-

Board Expectations

Your consulting team has been asked to recommend **one** of the three strategic investment options.

Your recommendation should evaluate each alternative based on, but not limited to:

- Financial viability
- Return on investment
- Market demand
- Customer impact
- Operational efficiency
- Scalability
- Technology readiness
- Environmental sustainability
- Implementation risks
- Long-term strategic value

The Board expects a balanced recommendation supported by structured analysis and clear business rationale.

Important Note

The information provided may not be sufficient to arrive at an immediate recommendation. Participants are expected to identify assumptions, evaluate trade-offs, and apply structured consulting frameworks to support their decision. There is **no single correct answer**; the strength of the recommendation will depend on the quality of analysis, strategic thinking, and the effective use of AI-assisted problem solving.
